PRSPR.Network Whitepaper

Solve for Everything through PRSPR
Arunabh Das www.appliaison.com | Dave D'Silva | www.davedsilva.com

A.
Introduction

My name is Arunabh Das a.k.a DasMachine or just plain Das. I am a Toronto-based Software Engineer, Blockchain developer, Blockchain Solutions consultant and CTO of App Liaison Inc. I've always been interested in exploring ways of empowering all human beings universally by using technological tools that are currently available and researching new technologies that are still nascent or in the incipient stages of development. By properly incentivizing the goals of ordinary human beings, governments and corporate entities, there is no conceivable reason why the combination of Blockchain, AI, and Nanotech can't fundamentally alter the relationship of humans with their shared environment and with other members of their species as well as the other species of the animal kingdom that inhabit this remarkable planet.

I have somehow always had the somewhat romantic notion that humans are fundamentally good and inherently have the capacity for positive intention and positive action. Therefore, as long as the incentives of humans can be aligned towards the attainment of socially productive and/or spiritually meaningful goals, one can expect the better angels of human nature to flourish. I wanted to explore the idea of whether it was possible to incentivize the positive aspects of human nature and to help those aspects to bloom and thrive.

I have also long held the altruistic belief that In order to explore this idea, I decided to start a podcast and to interview personalities in the blockchain and crypto space, to explore this idea of enabling and empowering all the humans on this planet to explore the realm beyond the traditional boundaries of the Maslow's hierarchy of needs, and specifically, to explore whether it was possible for our species to transcend the material realms and attain higher states of consciousness that scientists believe can be accessed using quantum and spiritual approaches. I decided to explore further and deeper. I called this project the Crypto Blockchain Podcast and it was just one step in a long journey. A long journey that started the first time I witnessed a Commodore 64 boot up in the computer lab of my middle school in 5th grade and it became clear to me,

that human beings are limited only by the limits of their imaginations, and that is to say, by no limits at all.

What is PRSPR?

PRSPR.network is envisioned as a decentralized marketplace of ideas, products and services that enables the sharing and exchange of ideas as well as the process of trade and commerce. It does so, by lowering transaction costs using crypto and distributed ledger technology (DLT).

Problem Statement

Although human beings all over this planet now have access to information and are connected now more than ever before in the history of the planet, there is a sense of isolation, anxiety, tribalism, and despair amongst humans all over the world. Since various forms of entertainment and materialism has replaced religion as the defacto belief system amongst many humans, the quest for meaning has ceased to be a goal amongst communities and societies across this planet. This has resulted in an abundance of material goods that can be produced as near-zero marginal cost but a scarcity of emotional capital and a scarcity of meaning and spiritual capital amongst humans.

Proposed Solution

The goal of PRSPR is to provide incentives for humans to believe in something bigger than themselves, to believe in the kindness of strangers, to reward the good deeds of their neighbours, and to increase trust and harmony between and amongst communities all over the world. The way to attain this goal is to lower the cost of transactions in trustless networks, thereby increasing the level of peer-to-peer commerce and exchange amongst all human beings. Removing the need for intermediaries in trade and commerce makes it so that the exchange of goods and services becomes frictionless and the mechanisms for rewarding good behavior and actions that have positive social impact becomes automatic.

Mission Statement

Be remarkable. Do remarkable. Live long and PRSPR.

We believe that all human beings have an intrinsic desire to do things that are remarkable, engage in endeavours that are meaningful, overcome challenges, solve problems and do impactful work. **PRSPR** aims to provide the platform and technology framework that makes it possible for all humans to engage in positive manner with other members of their species and with their shared environment in a way that is cooperative, rather than combative, and collaborative, rather than competitive.

Bootstrap and Activation

We believe that all humans are endowed by their creator with inherent worth and intrinsic value. In order to bootstrap the **PRSPR.network** blockchain, the smart contracts on PRSPR.network shall mint and air-drop 100,000.00 (one hundred thousand) PRSPR Dollars (**PRSPRD**) into the **PRSPR** wallets of all humans that downloads the PRSPR wallet from the App Store / Google Play (pending KYC). This airdrop of **PRSPRD** is one of the core premises of the **PRSPR** Project.

Once the bootstrap event has occurred in the PRSPR event-log, the once-in-a-millennia scheduled-reset event can be said to have been executed and all humans on this planet can now have the opportunity to contribute and devote all their time and energies towards solving any additional challenges such as finding cures for various ailments, cures for diseases, cures for cancer, and cure for death.

Solving for energy security is fundamentally a matter of deploying quantum fusion reactors.

Solving for food security becomes a matter of factory-farming cultured meat.

Solving for poverty is merely a matter of using blockchain to manage distribution of food and resources.

Solving for prevention of undesirable outcomes merely becomes a matter of incentivizing altruism using prspr tokens as a reward mechanism for altruism.

Solving for everything now becomes imminently possible.

In order to ensure that PRSPR dollars are scarce, we cap the total number of PRSPR dollars at 100, 000 * 10 B = 1000 T.

This way, there will only ever be a maximum of 100,000 PRSPRD in circulation per human on the planet even if the population of the planet reaches 10B. Scientists seem to agree that the population of the planet will peak at 10B and then decline or stay steady.

Thus, all human beings have the ability to aspire to atleast have a net-worth of $ 100,000.00 PRSPRD, but some can aspire to having a higher than average net-worth and those that have a lower than 100,000 net-worth can work towards having a higher net-worth. Thus, PRSPR is trying to solve not for equality of

outcomes, rather for equality of opportunity and the prevention of horrible outcomes.

Solving for everything now becomes imminently possible.

Technical Background

PRSPR Token, **prspr**, is an ERC-721 non-fungible-token minted as a collectible on PRSPR.network based on Ethereum blockchain. The price of **prspr** collectibles is allowed to float and the market. PRSPR token, **prspr** (in lowercase) may be used as a store of value in order to protect users from any price fluctuations that may occur on the PRSPR dollar, **PRSPRD**.

PRSPR Dollar, **PRSPRD** (in uppercase) is a store of value and it is initially valued at $1 CAD i.e. 1 PRSPR Dollar at the time of minting using Ethereum smart contract is valued at $ 1 CAD. However, the price is allowed to float and the market can decide the value of PRSPRD. The **PRSPR Dollar** is therefore a utility token, intended to be used as a medium of exchange on **PRSPR.network** decentralized apps.

I envision the PRSPR.network to be a secure, decentralized marketplace of ideas, products, and services where users can engage with other members of their species in order to attain their goals of living happy, joyous, meaningful lives instead of the status quo of a handful of mega-corporations extracting all the value from societies and leaving ordinary people unhappy, unfulfilled, stressed and anxious.

Enterprises can benefit from a place of public trust, for example, through the ability to ingest public datasets into the PRSPR DLT and to expose the API as an enterprise-facing API which allows enterprise customers to glean insights in a non-privacy-invasive way. This solves the problem that enterprises currently have of big-data trapped in silos that cannot be effectively utilized to solve social challenges.
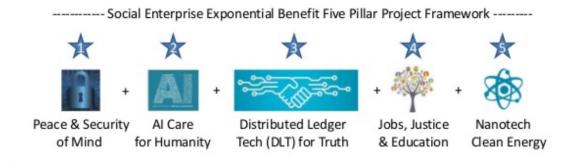

B. Enabling Agent

While attending Craig Major's Sept 27, 2018 TorontoStarts CryptoWalk event, I met Dave D'Silva. This website and the goals laid out, is a result of the Oct 3 Podcast Episode 3 interview (1).

Dave and I have teamed up. This paper will introduce my thoughts on the **"PRSPR.network"** to support and build on Dave's Emerging Tech Framework to

Unite Society" concept and [slide-deck](#) outlined on www.davedsilva.com (LinkedIn profile bio).

PRSPR.network is the DLT manifestation of Dave D'Silva's vision that is outlined in his slide deck. Now I will introduce Dave D'Silva's mechanism for which I am building the PRSPR.Network.

---------- Social Enterprise Exponential Benefit Five Pillar Project Framework ---------

Podcast Episode 3: Dave D'Silva's 1st interview

Dave calls for the advancement of peace and prosperity to unite society through phase III of a social enterprise five pillar framework centred on Toronto's emerging tech startup community, which began with a conversation with Bill Gates.

Dave offers an exponential benefit approach with a $6 Trillion track record deploying advanced technology and thinking involving Chiefs of Police, Premiers, International Ambassadors, and now, more formally with the UN. I, Das, will

document this journey through a series of Podcast interviews. I invite you to listen in.

"Live Long and PRSPR"

Listening to Dave explain his community goals, and track record of righting wrongs, I suggested to Dave that he should launch a Token, and asked for a name. Dave said "Prosperity". What sprang to Mind was the words of Spock, "Live long and prosper".

Let me start with an introduction of Dave's concepts through a Frequently Asked Question (FAQ) format.

FAQ

Q: Please explain Advancing Peace and Prosperity Emerging Tech Framework to Unite Society Phase III: Scaling a $6 Trillion System?

A: Peace and prosperity is a fundamental requirement for quality of life. Emerging technology as a Framework can support a solution. We are at Phase III, where McKinsey revealed that as of 2018, PriceMetrix (Phase II) was tracking $6 trillion in investment assets, thus proving the Emerging Tech Framework scales into exponential benefits.

Q: What is meant by the Social Enterprise Exponential Benefit Five Pillar Project Framework?

A: Social Enterprise is meant to mean enterprises which return a social or environmental, as well as a financial return.

Exponential Benefit was mentioned above, as this is the track record, starting from zero in year 2000 when PriceMetrix was created.

The Five Pillar Project Framework is the Theory of Change that was spoken or implied in a conversation with Bill Gates at the University of Waterloo that launched IMSG into the Toronto Stock Exchange as Phase I.

The five pillars are:
1. Peace and Security of Mind
2. AI Care for Humanity
3. Distributed Ledger Tech (DLT) for Truth

4. Jobs, Justice & Education
5. Nanotech Clean Energy.

Q: Please explain each of the five pillars.

At this time, answering that question requires a live presentation of the slide deck.

Q. Are there projects other than those that initiated the five pillars?

A. Yes. There is a growing set of projects revealed through a live presentation.

Q. Who are the project stakeholders?

A. The stakeholders include National Security, United Nations, Police, Defence Department, Intellectual Property Canada, Microsoft, PMI, MaRS SVX, Collider-X, York Angels, Universities (Ryerson, York, Toronto) as well as AI, Blockchain, and Politician communities.
